ASTM E74-13a Explained. What we do 2
We are a manufacturing company that

Online Library Astm E74 13a

produces force calibration equipment and adapters, that are used in industry, to measure force. We have state of the art force and torque calibration laboratories and offer calibrations at a very high level of accuracy.

Per Section 8.6 of ASTM E74-13a: "The loading range shall not include forces outside the range of forces applied during the calibration. Per Section 7.2.1: "If the lower limit of the loading range of

Online Library Astm E74 13a

the device (see 8.6.1) is anticipated to be less than one-tenth of the maximum force applied during calibration, then forces should be applied at or below this lower limit.”

ASTM E74 Calibration Procedure Simplified

4.1 Testing machines that apply and

Online Library Astm E74 13a

indicate force are in general use in many industries. Practices E4 has been written to provide a practice for the force verification of these machines. A necessary element in Practices E4 is the use of force-measuring instruments whose force characteristics are known to be traceable to the SI. Practices E74 describes how these force-measuring

It's been five years since ASTM E74 was last updated. The last version of the standard was ASTM 13a, and I believe we may have an ASTM E74-18a.

However, the new standard is released and this blog is going to detail some of the major changes between ASTM E74-13a and ASTM E74-18. A list of changes

ASTM E74-18 Changes

Section 7, note 6 of ASTM E74-13a addresses descending loading. There should be at least one calibration force for each 10-percent interval throughout the loading range. If the instrument is to be used below 10 percent of its capacity, a low force should be applied.
