Your feet are important, especially if you have diabetes. With diabetes, it means you're much more likely to develop problems with your feet - problems that could end up as amputations. But most amputations can be prevented. If you take good care of your feet and check them regularly, you can reduce your risk of developing foot problems.

Having diabetes means you're at much greater risk of developing foot problems. This is because raised blood glucose, also known as blood sugar, can damage the sensation in your feet. It can also affect your circulation, which can lead to you getting less blood supply to your feet. Without a good blood supply you may have problems with cuts and sores healing.

Measure length: Place one of your kid's feet on the length ruler, aligning their heel with the curved line. Double check that their heel is touching the wall. On the size guide, mark the first visible line past their big toe with a pencil and then note the length measurement in the space provided on the guide.
