Suns Path Regents Lab Answer

The four seasons in New York State are a result of Earth's 23.5 degree tilted axis, and the revolution of Earth around the Sun. As Earth orbits the Sun, the tilt causes the direct rays of the Sun to strike locations between the Tropic of Cancer (23.5 deg N) and the Tropic of Capricorn (23.5 deg S). New York is generally located between 41 deg N and 45 deg N latitude, so it never receives ...

Seasonal Path of the Sun and Latitude Overview This lesson is a modification of what Dave Hess and I, Stan Skotnicki, use in our Earth Science classes at Cheektowaga Central High School. It is an extension of our lesson on Celestial Motions as we track the apparent path of the sun across the sky at different latitudes.

Seasonal Path of the Sun and Latitude - PolarTREC

With this interactive lab, you can examine the main factors that affect temperature, length of day and seasonal altitude of the sun. Hopefully you will discover how the position of the Earth in it's orbit coupled with the tilt of the Earth's axis of rotation is responsible for seasons and the position of the path of our Sun in the sky over the course of a day.
